COMPARISON OF SURVEY RESULTS BY YEAR

Table 10.2 below outlines the percent of responses from the three most recent school year surveys (2023-2024, 2024-2025, and 2025-2026). Please note that for each survey year, not all respondents answered every question. All percentages calculated are based on the total weighted number of people answering the question, rather than the total number of people who completed a survey. In addition, the percentages for Table 10.2 represent percentages by year; therefore, for each response category, percentages will total 100 percent within each year and not across all years.
